1 MAIN FEATURES

ITEM	CONTENTS
Display Format	96 x 16 Dots
Overall Dimensions(W*H*T)	29.10×9.20× 1.60 mm
Active Area(W*H)	21.104 × 3.504 mm
Viewing Area(W*H)	23.104 x 5.504 mm
Display Mode	Passive Matrix
Display Colour	Blue Colour
Driving Method	1 / 16 duty
Driver IC	SSD1306
Operating temperature	-30°C ~ +70°C
Storage temperature	-40°C ~ +80°C

Product No.	DD-9616BE-2A	REV. A

3 ELECTRICAL SPECIFICATION

3.1 ABSOLUTE MAXIMUM RATINGS

VSS = 0 V, Ta = 25 °C

Item	Symbol	Min	Max	Unit	Note
Supply Voltage for Operation	V _{DD}	-0.3	4	V	Note 1, 2
Supply Voltage for Display	V _{CC}	0	15	V	
Operating Temperature	Top	-30	70	°C	
Storage Temperature	Tstg	-40	80	°C	
Static Electricity	Be sure that you are grounded when handling displays.				

Note 1: All the above voltages are on the basis of “VSS=0V”.

Note 2: When this module is used beyond above absolute maximum ratings, permanent damage to the module may occur. Also for normal operations it's desirable to use this module under the conditions according to Section 3.2 “Electrical Characteristics” and section 4 “optical characteristic. If this module is used beyond these conditions the module may malfunction and the reliability could deteriorate.

3.2 ELECTRICAL CHARACTERISTICS

3.2.1 DC Characteristics

Characteristics	Symbol	Conditions	Min	Typ	Max	Unit
Supply Voltage for Logic	V _{DD}		1.65	2.8	3.3	V
Supply Voltage for Display	V _{CC}	Note 3	7.0	7.25	7.5	V
Supply Voltage for DC/DC	V _{BAT}	Internal DC/DC	3.3	-	4.2	V
High Level Input	V _{IH}	-	0.8xV _{DD}	-	V _{DD}	V
Low Level Input	V _{IL}	-	0	-	0.2xV _{DD}	V
High Level Output	V _{OH}	I _{out} =100μA, 3.3 MHz	0.9xV _{DD}	-	V _{DD}	V
Low Level Output	V _{OL}	I _{out} =100μA, 3.3 MHz	0	-	0.1xV _{DD}	V
Operating Current for VDD	I _{DD}	Note 4 Note 5	-	180	300	μA
Operating Current for VBAT(VCC Generated by Internal DC/DC)	I _{BAT}	Note 4	-	7.5	9.4	mA
		Note 5	-	12.6	15.8	mA
Sleep Mode Current for VCI	I _{DD, SLEEP}	-	-	1	5	μA
Sleep Mode Current for VCC	I _{CC, SLEEP}	-	-	1	5	μA

Note 3 Brightness (L_{br}) and Supply Voltage for Display (V_{CC}) is subject to the change of the panel characteristics and the customer's request.

Note 4 V_{DD} = 2.8V, V_{CC} = 7.25V, 50% Display area turned on.

Note 5 V_{DD} = 2.8V, V_{CC} = 7.25V, 100% Display area turned on

Product No.	DD-9616BE-2A	REV. A

3.3 INTERFACE PIN ASSIGNMENT

No.	Symbol	I/O	Function
1	C2P	I	Positive Terminal of the Flying Inverting Capacitor Negative Terminal of the Flying Boost Capacitor The charge-pump capacitors are required between the terminals. They must be floating when the converter is not used.
2	C2N	I	
3	C1P	I	
4	C1N	I	
5	VBAT	P	Power Supply for DC/DC Converter Circuit This is the power supply pin for the internal buffer of the DC/DC voltage converter. It must be connected to VDD source when the converter is used. It should be floating to VDD when the converter is not used.
6	VBREF	P	Voltage Reference for DC/DC Converter Circuit This pin is the internal voltage reference of booster circuit. A stabilization capacitor should be connected to VSS
7	VSS	P	Ground of Logic Circuit This is a ground pin. It acts as a reference for the logic pins. The OEL driving voltages and the analogue circuits. It must be connected to external ground.
8	VDD	P	Power Supply for Logic This is a voltage supply pin. It must be connected to external source
9	RES#	I	Power Reset for Controller and Driver This pin is reset signal input.. When the pin is low, initialization of the chip is executed.
10	SCL	I	I2C Bus Clock Signal The transmission if information in the I2C bus is following a clock signal. Each transmission of data bit is taken place during a single clock period of this pin
11	SDA	I/O	I2C Bus Data Signal This pin acts as a communication channel between the transmitter and the receiver.
12	IREF	I	Current Reference for Brightness Adjustment This pin is segment current reference pin. A resistor should be connected between this pin and VSS. Set the current lower than 12.5μA.
13	VCOMH	O	Voltage Output High Level for COM Signal This pin is the input pin for the voltage output high level for COM signals. A capacitor should be connected between this pin and VSS.
14	VCC	P	Power Supply for OEL Panel This is the most positive voltage supply pin of the chip. It must be connected to external source.

5 FUNCTIONAL SPECIFICATION

5.1 COMMANDS

Please refer to the Technical Manual for the SSD1306

5.2 POWER UP/DOWN SEQUENCE

To protect panel and extend the panel lifetime, the driver IC power up/down routine should include a delay period between high voltage and low voltage power sources during turn on/off. It gives the panel enough time to complete the action of charge and discharge before/after the operation.

5.2.1 POWER UP SEQUENCE

1. Power up V_{DD}
2. Send Display off command
3. Initialization
4. Clear Screen
5. Power up V_{CC}
6. Delay 100ms
(When V_{CC} is stable)
7. Send Display on command

5.2.2 POWER DOWN SEQUENCE

1. Send Display off command
2. Power down V_{CC}
3. Delay 100ms
(When V_{CC} is reach 0 and panel is completely discharges)
4. Power down V_{DDIO}

5.3 RESET CIRCUIT

When RES# input is low, the chip is initialized with the following status:

1. Display is OFF
2. 128×64 Display Mode
3. Normal segment and display data column and row address mapping (SEG0 mapped to column address 00h and COM0 mapped to row address 00h)
4. Shift register data clear in serial interface
5. Display start line is set at display RAM address 0
6. Column address counter is set at 0
7. Normal scan direction of the COM outputs
8. Contrast control register is set at 7Fh
9. Normal display mode (Equivalent to A4h command)

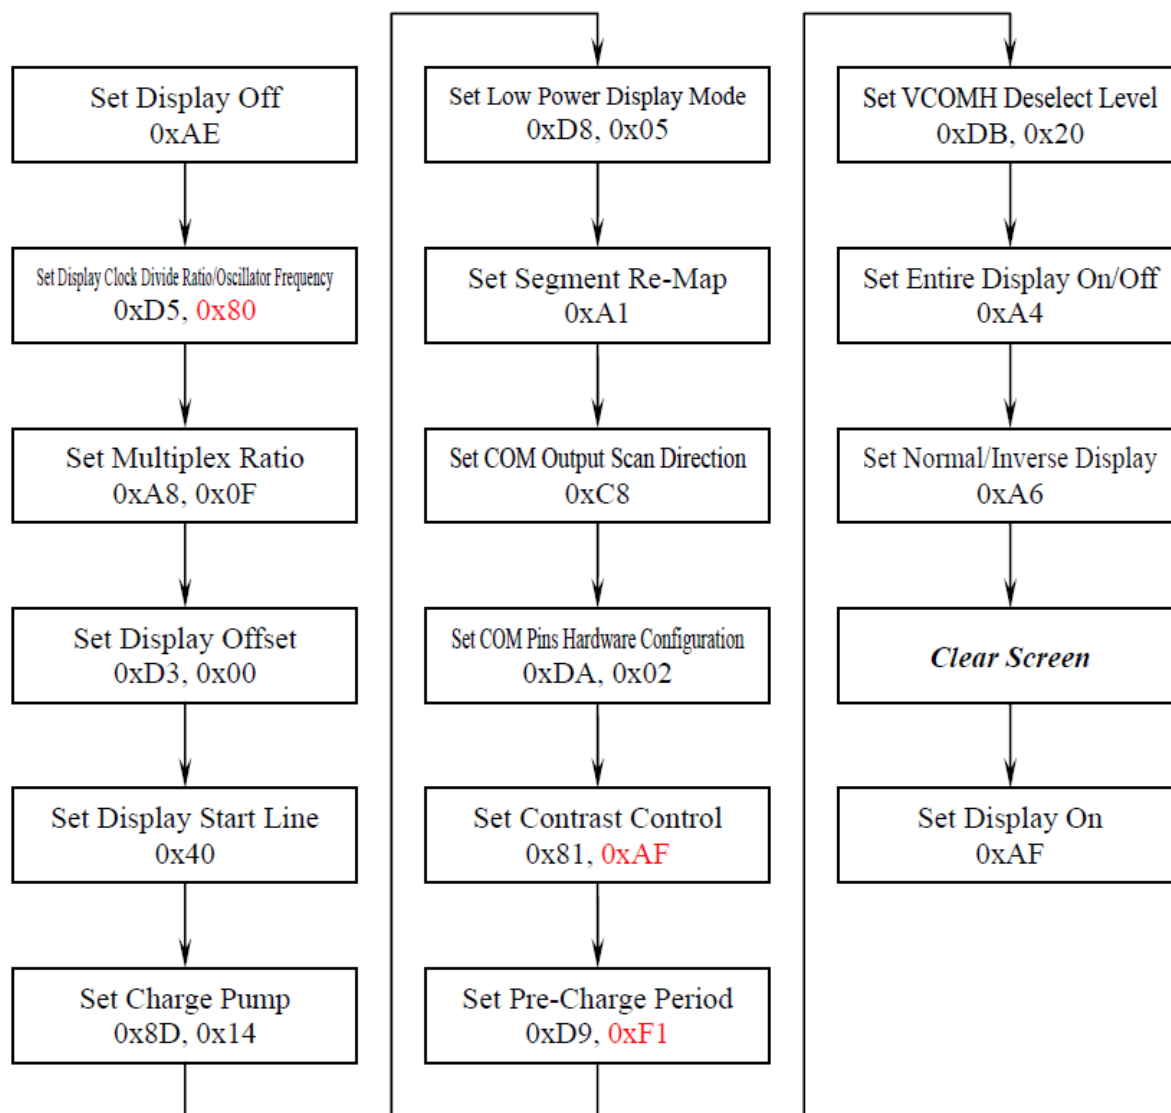

Product No.	DD-9616BE-2A	REV. A

DENSITRON DD-9616BE-2A TW YY MM

7 QUALITY ASSURANCE SPECIFICATION

7.1 CONFORMITY

The performance, function and reliability of the shipped products conform to the Product Specification.

7.2 DELIVERY ASSURANCE

7.2.1 DELIVERY INSPECTION STANDARDS

IPC-AA610, class 2 electronic assembly's standard

7.2.2 Zone definition

7.2.3 Visual inspection

Test and measurement to be conducted under following conditions

Temperature:	23±5□
Humidity:	55±15%RH
Fluorescent lamp:	30 W
Distance between the Panel & Eyes of the Inspector:	□30cm
Distance between the Panel & the lamp:	□50cm

Product No.	DD-9616BE-2A	REV. A

7.3 DEALING WITH CUSTOMER COMPLAINTS

7.3.1 Non-conforming analysis

Purchaser should supply Densitron with detailed data of non-conforming sample.

After accepting it, Densitron should complete the analysis in two weeks from receiving the sample.

If the analysis cannot be completed on time, Densitron must inform the purchaser.

7.3.2 Handling of non-conforming displays

If any non-conforming displays are found during customer acceptance inspection which Densitron is clearly responsible for, return them to Densitron.

Both Densitron and customer should analyse the reason and discuss the handling of non-conforming displays when the reason is not clear.

Equally, both sides should discuss and come to agreement for issues pertaining to modification of Densitron quality assurance standard.

Product No.	DD-9616BE-2A	REV. A

Page	20 / 24

8 RELIABILITY SPECIFICATION

8.1 RELIABILITY TESTS

Test Item	Test Condition	Evaluation and assessment
High Temperature Operation	70°C±2, 240 hours	The operational functions work
Low Temperature Operation	-30°C±2, 240 hours	
High Temperature Storage	80°C±2, 240 hours	
Low Temperature Storage	-40°C±2, 240 hours	
High Temperature & High Humidity Storage(Operation)	60°C±2, 90%RH, 120 hours	
Thermal Shock	-40°C to 85°C, 24 cycles 1 Hour	

- The samples used for above tests do not include polarizer.
- No moisture condensation is observed during tests.

8.1.1 FAILURE CHECK STANDARD

After the completion of the described reliability test, the samples were left at room temperature for 2 hrs prior to conducting the failure test at 23±5 °C;55±15% RH

8.2 LIFE TIME

Item	Description
1	Function, performance, appearance, etc. shall be free from remarkable deterioration more than 10,000 hours under ordinary operating conditions of room temperature (25±10 °C), normal humidity (50% RH), and in area not exposed to direct sunlight. Storage Life time is 20,000 hr under room temperature (25±10 °C), normal humidity (50% RH)
2	End of lifetime is specified as 50% of initial brightness.

8.3 Failure Check Standard

After the completion of the described reliability test, the samples were left at room temperature for 2 hrs prior to conducting the failure test at 23±5°C; 55±15% RH.

Product No.	DD-9616BE-2A	REV. A

Page	21 / 24
------	---------

9 PRECAUTIONS

9.1 Handling

Safety

If the panel breaks, be careful not to get the organic substance in your mouth or in your eyes.
If the organic substance touches your skin or clothes, wash it off immediately using soap and plenty of water.

Mounting and Design

Place a transparent plate (e.g. acrylic, polycarbonate or glass) on the display surface to protect the display from external pressure. Leave a small gap between the transparent plate and the display surface.

Design the system so that no input signal is given unless the power supply voltage is applied.

Caution during OLED cleaning

Lightly wipe the display surface with a soft cloth soaked with Isopropyl alcohol, Ethyl alcohol or Trichlorotrifluoroethane.

Do not wipe the display surface with dry or hard materials that will damage the polariser surface.

Do not use aromatic solvents (toluene and xylene), or ketonic solvents (ketone and acetone).

Caution against static charge

As the display uses C-MOS LSI drivers, connect any unused input terminal to V_{DD} or V_{SS} . Do not input any signals before power is turned on.

Also, ground your body, work/assembly table and assembly equipment to protect against static electricity.

Packaging

Displays use OLED elements, and must be treated as such. Avoid strong shock and drop from a height.

To prevent displays from degradation, do not operate or store them exposed directly to sunshine or high temperature/humidity.

Caution during operation

It is indispensable to drive the display within the specified voltage limit since excessive voltage shortens its life.

Other Precautions

When a display module is operated for a long of time with fixed pattern may remain as an after image or slight contrast deviation may occur.

Nonetheless, if the operation is interrupted and left unused for a while, normal state can be restored.

Also, there will be no problem in the reliability of the module.

Storage

Store the display in a dark place where the temperature is $25^{\circ}\text{C} \pm 10^{\circ}\text{C}$ and the humidity below 50%RH.

Store the display in a clean environment, free from dust, organic solvents and corrosive gases.

Do not crash, shake or jolt the display (including accessories).

Product No.	DD-9616BE-2A	REV. A

Page	22 / 24
------	---------

9.2 STORAGE

When storing OEL display modules, put them in static electricity preventive bags avoiding exposure to direct sun light nor to lights of fluorescent lamps, etc. and, also, avoiding high temperature and high humidity environments or low temperature (less than 0°C) environments. (We recommend you to store these modules in the packaged state when they were shipped from Factory.)

At that time, be careful not to let water drops adhere to the packages or bags nor let dewing occur with them.

If electric current is applied when water drops are adhering to the surface of the OEL display module, when the OEL display module is being dewed or when it is placed under high humidity environments, the electrodes may be corroded and be careful about the above.

9.3 DESIGNING

The absolute maximum ratings are the ratings which cannot be exceeded for OEL display module, and if these values are exceeded, panel damage may be happen.

To prevent occurrence of malfunctioning by noise: pay attention to satisfy the VIL and VIH specifications and, at the same time, to make the signal line cable as short as possible.

We recommend you to install excess current preventive unit (fuses, etc.) to the power circuit (VCI). (Recommend value: 0.5A)

Pay sufficient attention to avoid occurrence of mutual noise interference with the neighbouring devices.

As for EMI, take necessary measures on the equipment side basically.

When fastening the OEL display module, fasten the external plastic housing section.

If power supply to the OEL display module is forcibly shut down by such errors as taking out the main battery while the OEL display panel is in operation, we cannot guarantee the quality of this OEL display module.

The electric potential to be connected to the rear face of the IC chip should be as follows: SSD1351

* Connection (contact) to any other potential than the above may lead to rupture of the IC.

9.4 Disposing

Request the qualified companies to handle industrial wastes when disposing of the OEL display modules. Or, when burning them, be sure to observe the environmental and hygienic laws and regulations.

9.5 Other

When an OEL display module is operated for a long of time with fixed pattern may remain as an after image or slight contrast deviation may occur. Nonetheless, if the operation is interrupted and left unused for a while, normal state can be restored. Also, there will be no problem in the reliability of the module.

Product No.	DD-9616BE-2A	REV. A

Page	23 / 24
------	---------

To protect OEL display modules from performance drops by static electricity rapture, etc., do not touch the following sections whenever possible while handling the OEL display modules.

- * Pins and electrodes
- * Pattern layouts such as the COF

With this OEL display module, the OEL driver is being exposed. Generally speaking, semiconductor elements change their characteristics when light is radiated according to the principle of the solar battery. Consequently, if this OEL driver is exposed to light, malfunctioning may occur.

- * Design the product and installation method so that the OEL driver may be shielded from light in actual usage.
- * Design the product and installation method so that the OEL driver may be shielded from light during the inspection processes.

Although this OEL display module stores the operation state data by the commands and the indication data, when excessive external noise, etc. enters into the module, the internal status may be changed. It therefore is necessary to take appropriate measures to suppress noise generation or to protect from influences of noise on the system design.

We recommend you to construct its software to make periodical refreshment of the operation statuses (re-setting of the commands and re-transference of the display data) to cope with catastrophic noise.
